Drawings

1. New corrected drawings in compliance with 37 CFR 1.121(d) are required in this application. The colored drawings are not capable of being properly scanned. The color CAD drawings scan as a solid black drawing. The details of the device cannot be seen. Also, color drawings are not allowed unless they have been approved by the Petition's Office. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 1 has been rejected under 35 U.S.C. 102(b) as being anticipated by Lohr, 3605210. Lohr discloses a housing (52, 54, figure 2), a frame (24, figure 2), two pawls (40, 42), each including a release abutment, i.e., the portion of the pawl that forms the slots 74, 76, a hinge pin (44, 46), a tongue (82, 84), a biasing member (50) biasing the pawls and the release button (64, 66), wherein the release button has an inclined abutment surface (70, 72) engaging the release abutments.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 2 has been rejected under 35 U.S.C. 103(a) as being unpatentable over Lohr, 3605210. Lohr discloses pins (72, 74) on the release button and inclined abutment surfaces on the pawls. The claim requires the opposite, i.e., pins on the pawls and abutment surfaces on the button. Either of these two arrangements work equally as well as the other in performing the release operation. Therefore, it would have been an obvious design choice to modify Lohr's device to have the pins on the pawls and the abutment surfaces on the release button. Furthermore, the specification fails to disclose any criticality with the location of the pins and abutment surfaces.

Allowable Subject Matter

6. Claims 3-5 have been objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Election/Restrictions

7. Claims 6-29 have been withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention and species, there being no

allowable generic or linking claim. Election was made **without** traverse in the reply filed on 5/18/2007.
